

AMERICAN GILSONITE COMPANY

Bringing innovative solutions to water-based drilling fluids applications

Introducing the ultimate product portfolio for boosting WBM performance

Discover the comprehensive range of top-tier additives by American Gilsonite Company, meticulously engineered to enhance the efficiency of your water-based systems.

Gilsonite® ENV

Maximizes shale control while minimizing the need for additional additives in WBM formulations

- > Multifunctional proprietary blend of uintaite and biopolymers for improved wellbore construction
- > High organic nitrogen content of Gilsonite® uintaite provides shale control
- > Enhanced solids suspension (LSRV)
- > Unique properties yield improved filter cake
- > Reduced torque and drag and increased ROP

UP TO
50%

reduction in product concentrations

Gilsonite® H₂O

Delivers excellent fluid loss control and shale stabilization in WBM fluids

- > Blend of uintaite and sulfonated asphalt creates synergistic chemistry, maximizing drilling fluid performance
- > Superior shale stability
- > API/HPHT fluid loss control in WBM and OBM
- > Reduces torque and drag and increased ROP
- > Well-site inventory footprint reduction

40%

less accretion on average

AGC Sulfonated Asphalt

Outperforms other leading products on the market

- > Rigorously tested with American Gilsonite Company QA/QC standards
- > Consistent fluid loss control versus alternatives
- > Partially oil soluble with water-oil emulsifying properties
- > Improves lubricity
- > Compatible with water and brine systems

34%

lower fluid loss than leading sulfonated asphalts on average
