

# AGC SULFONATED ASPHALT

Provides greater performance at a competitive cost

## Differentiating operational performance

AGC Sulfonated Asphalt is a multi-purpose additive for water-based and oil-based fluids, rigorously tested and backed by our stringent QA/QC standards to guarantee the consistent performance that American Gilsonite Company products have provided in the oil field for over 70 years.

### AGC Sulfonated Asphalt outperforms other leading products on the market

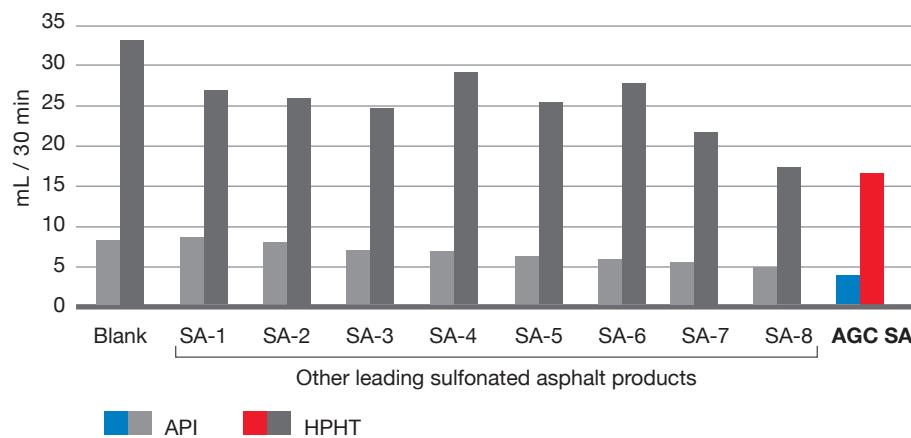

- Consistent and reliable performance as a result of QA/QC standards
- Costs on average 30% less than the leading product in the market
- Improves fluid loss 34% on average
- Currently stocked and locally available for pickup

# 34%

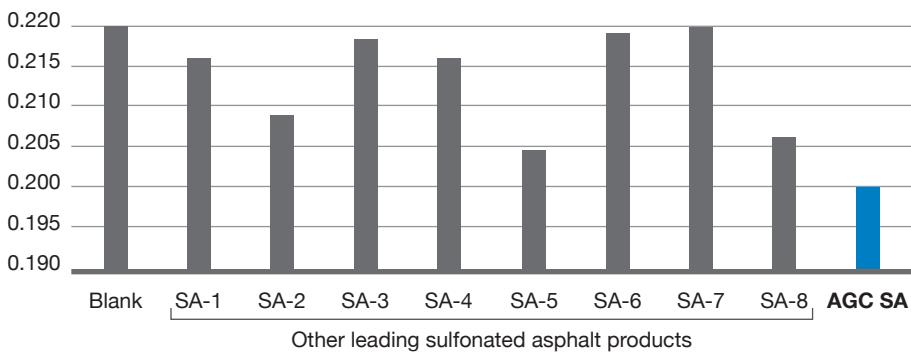

lower fluid loss than leading sulfonated asphalts on average

- Compatible with fresh water and brine-based drilling fluid systems
- Predominantly water soluble (>70%), partially oil soluble and has water-oil emulsifying properties
- Provides second-to-none fluid loss control performance in challenging temperature conditions (250°F) when evaluated against leading SA products
- Improves lubricity

API & HPHT fluid loss @250°F

Lubricity coefficient
